

General Information:

Hydraflo L is a liquid wetting agent that is as safe for use on delicate ornamental flowering plants as it is on turfgrass greens, sportsfields and lawns. Hydraflo L encourages free drainage from water logged soils in winter and during heavy rainfall. This inhibits surface moss, algae growth and soil borne pathogens. When water logged soils drain, air is allowed into the root zone enabling the plant to take up valuable nutrients.

Hydraflo L effectively decreases water surface tension aiding the successful rewetting of soils in dry summer periods, eliminating localized dry spots and increasing the uniformity of wetting throughout the soil profile. By allowing for better water penetration and absorption, Hydraflo L helps grow deeper stronger roots.

DIRECTIONS FOR USE:

TURF AND AMENITY			
SITUATION	RATE	APPLICATION FREQUENCY	COMMENTS
Greens and fine turf, lawns and landscape.	0.125-0.375 Litres/100m ²	3 months or as required	Apply in advance of expected dry patch formation. Hydraflo L is a polymeric wetting agent that rewets readily after treated soil has been dry for extended periods. Application through boom spray should use a minimum dilution of 1 part Hydraflo L to 200 parts water (1.0 Litres Hydraflo L in 200 Litres of water). Additional irrigation (3-6mm) should be applied to ensure the Hydraflo L is thoroughly watered into the soil profile.
Fairways, Sports turf, lawn turf and landscape	0.375-0.625 Litres/100m ²	6 months or as required	

NURSERY AND HORTICULTURE			
SITUATION	RATE	APPLICATION FREQUENCY	COMMENTS
Propagation and plug potting mixes	(1 to 1000) 10 mls Hydraflo L to 10 Litres water.	3 months or as required	Prepare sufficient solution of Hydraflo L with water (at the specified dilution rate) to treat the intended volume of growing media. Use this solution to thoroughly soak the soil media. No extra irrigation is required beyond initial drenching, other than normal irrigation practices.
Nursery and greenhouse potting soils	(1 to 500) 20 mls Hydraflo L to 10 Litres water.	6 months or as required	

Caution: Hydraflo L is classified as non-toxic. However normal precautions should be taken. If eye or skin contact occurs, wash affected area with plenty of water.

100% W/V concentrated surfactant.
Long term soil wetting agent.

HYDRAFLO® L

Liquid Wetting Agent

- **UNIFORM WETTING TO PREVENT SUMMER DRY PATCH.**
- **LONG TERM PERFORMANCE ENABLES REWETTING OF DRY SOILS.**
- **AIDS INFILTRATION AND DRAINAGE FOR DEEPER STRONGER ROOTS.**
- **SAFE FOR USE ON ALL ORNAMENTAL PLANTS INCLUDING TURFGRASSES.**
