

Scotts® Landscaper PRO

OSMOCOTE® ALL GARDEN FERTILISER

Scotts Landscaper PRO Osmocote All Garden Fertiliser is a controlled release fertiliser suitable for planting out of trees, shrubs and bedding plants. The low P formulation makes it suitable for general purpose fertilisation of flowering trees (including Australian natives). Osmocote provides metered delivery of nitrogen, phosphorus, and potassium for the specified longevity.

Soil moisture activates Osmocote controlled release fertiliser, but Osmocote's natural soya coating only releases the fertiliser at the appropriate soil temperature. Osmocote controls the release of fertiliser assuring the plant receives nutrition when needed. Osmocote minimises fertiliser waste, run-off or leaching. After the fertiliser is released, the biodegradable soya coating decomposes in the soil.

DIRECTIONS FOR USE

At planting – Mix Osmocote into the planting soil per application rate table below. Fill around the roots in the planting hole with the enriched soil and water well. Reapply in 6 months according to rates for established plants.

Established plants – Sprinkle one tablespoon (15g) of Osmocote per 30cm of plant height around the plant's drip line (or topdress with 4g/L of pot volume). Lightly scratch into soil or cover with topsoil or mulch.

When to apply – Apply at any time of the year. For best results, apply in spring when new growth appears and late summer.

SUGGESTED APPLICATION RATES

	Planting	Established Plants
Trees	50-100g / tree	Topdress with 15g / 30cm plant height or 4g/L of pot volume
Shrubs	30-50g / plant	
Annual beds	5kg / 100m ²	
1 tablespoon = 15g or 20mL		

HELPFUL HINTS

- Work Osmocote into the top 10cm of soil. This technique delivers the nutrients directly to the plant's root system.
- Water Osmocote in thoroughly to start the feeding process and to settle the soil around transplants, eliminating air pockets that might allow roots to dry out.

Controlled release fertiliser, feeding for 6 months.

NPK 21:2:8

- Planting out of trees, shrubs and bedding plants
- Maintenance of garden beds and potted plants
- Low phosphorus - suitable for Australian natives
- Added Iron (Fe) for good leaf colour
- Safer for the environment, minimal leaching
